Chapter 1

Trust through Stories

This book contains stories about where certain public keys came from and a little about the people who use them.

Some people use public key cryptography to digitally sign their works. They do this so others can prove where copies of such works came from. Usually, digital tools automatically verify these digital signatures so people don't have to manually. However, in order to verify such tools, at some point a person must verify at least one digital signature for themselves.

Chapter 2 List of Public Keys

Each section in this chapter contains a story about a person or organization that uses a public-private key pair. Each story consists of some brief background information, a history of notable events, and public key information. Key fingerprints are included. Links to public keys are made available where possible.

10 LIST OF PUBLIC KEYS

2.1 BITCOIN CORE

2.1.1 Background

BITCOIN CORE is the "reference implementation" of the BITCOIN protocol. It is maintained by a group of people who have become known as the BITCOIN CORE developers.

Early in the blockchain's history, the software that verified transactions against balances of previous transactions was a WINDOWS executable known as BITCOIN. The initial release of this software was by an entity that called themselves SATOSHI NAKAMOTO. Satoshi later gave up the code maintainer role of the project. The person who subsequently gained control was a person named Gavin Andresen. The software was rebranded from BITCOIN to BITCOIN CORE at version 0.9.0.^{2.1.1} A developer named WLADIMIR J. VAN DER LAAN became owner of the signing keys of the reference implementation starting at version 0.9.3. VAN DER LAAN originally used a personal key (0x74810B012346C9A6) to sign binaries but later created a dedicated key (0x90C8019E36C2E964) to sign binaries.

There exist various dubious theories regarding PGP key use by SATOSHI NAKAMOTO.^{2.1.2} The most likely candidate (0x18C09E865EC948A1) is one signed by BITCOIN CORE developers Peter Todd (0x7FAB114267E4FA04) and WLADIMIR J. VAN DER LAAN (0x74810B012346C9A6).

2.1.2 History

- 2011-08-24. Creation date of VAN DER LAAN's personal signing key 0x74810B012346C9A6.
- 2011-12-15. Creation date of Andresen's dedicated code signing key 0x29D9EE6B1FC730C1.
- **2013-03-23.** Earliest snapshot of the https://bitcoin.org website on the INTERNET ARCHIVE. ^{2.1.3} It is a redirect to https://bitcoin.org/en.
- 2013-04-11. Earliest snapshot of the https://bitcoincore.org website on the INTERNET ARCHIVE. 2.1.4
- **2013-07-27.** Earliest snapshot of main GITHUB repository at https://github.com/bitcoin/bitcoin on the INTERNET ARCHIVE.^{2.1.5}
- 2014-03-19. The reference client rebranded from BITCOIN to BITCOIN CORE.
- **2014-04-08.** Gavin Andresen steps down as lead developer. Hands over role to WLADIMIR J. VAN DER LAAN.^{2.1.6} Andresen maintains commit privileges to the GITHUB repository.
- 2015-06-24. Creation date of VAN DER LAAN's dedicated code signing key 0x90C8019E36C2E964.
- **2016-05-02.** Gavin Andresen's commit privileges were revoked by other BITCOIN CORE developers after Andresen published a blog post claiming Craig Wright was Satoshi Nakamoto.^{2,1,7}

2.1.3 Public Key Details

2.1.3.1 Binary Signing Key (v0.11.0-)

This key $^{2.1.8}$, owned by WLADIMIR J. VAN DER LAAN, has been used to sign BITCOIN CORE releases since version 0.11.0.

^{2.1.1.} See https://bitcoin.org/en/release/v0.9.0#rebranding-to-bitcoin-core.

```

2.1.3.3 Binary Signing Key (V0.8.6-v0.9.2.1)

Gavin Andresen used this dedicated code-signing key $^{2.1.10}$ to sign BITCOIN versions v0.8.6-v0.9.2.1. As of 2021-07-19, these versions and their signatures are available at https://bitcoincore.org/bin/insecure/.

2.1.3.4 Satoshi Nakamoto

The dsa1024 algorithm this key^{2,1,11} uses is considered weak by the the NIST standard SP800-57 Part 1 Revision 5: *Recommendation for Key management*.^{2,1,12} The key offers only 80 bits of security against the possibility of impersonation via a brute force attack. Nevertheless, this key has a signature of BITCOIN CORE developer Peter Todd (0x7FAB114267E4FA04) dated 2013-10-12. Todd also committed the full fingerprint in a BITCOIN FOUNDATION document on 2013-04-26^{2,1,13}. This key also has a signature of BITCOIN CORE maintainer VLADIMIR J. VAN DER LAAN's personal key (0x74810B012346C9A6) dated 2013-05-10.

12 LIST OF PUBLIC KEYS

2.2 CRYPTOMATOR

2.2.1 Background

CRYPTOMATOR is a cross-platform file storage privacy application. It permits storing files on a third-party file storage services (e.g. DROPBOX) in encrypted form and accessible to the user as a virtual mountable drive. In other words, CRYPTOMATOR acts as an encryption layer between a user and a file storage service. Compiled binary releases are available for WINDOWS, MACOS, LINUX, ANDROID, and IOS^{2,2,1}.

As of 2021-12-22, the latest version of CRYPTOMATOR is version 1.6.5 (Hotfix) available on GITHUB. ^{2,2,2} Judging from commit signatures of the GITHUB repository ^{2,2,3}, the main developers appear to be SEBASTIAN STENZEL (0x667B866EA8240A09) ARMIN SCHRENK (0x748E55D51F5B3FBC), and TOBIAS HAGEMANN (0x69CEFAD519598989).

2.2.2 History

2015-01-01. First snapshot of https://cryptomator.org captured on the INTERNET ARCHIVE. ^{2,2,4} Signature of latest version of CRYPTOMATOR (1.4.11) uses PGP key 0x509C9D6334C80F11. ^{2,2,5}

2018-06-17. Binary signing PGP key 0x509C9D6334C80F11 published as GITHUB gist.^{2,2,6} Key used to sign CRYPTOMATOR versions prior to *1.5.8*.

2020-09-01. Binary signing PGP key 0x615D449FE6E6A235 published as GITHUB gist.^{2,2,7} Key used to sign CRYPTOMATOR version *1.5.8* onward (as of 2021-12-22).

2020-09-02. Old binary signing PGP key 0x615D449FE6E6A235 signed by new PGP key 0x509C9D6334C80F11.^{2,2,8} Notice of revocation of old key and signing of new key by old key posted in GITHUB issue thread.^{2,2,9}

2.2.3 Public Key Details

2.2.3.1 Binary signing key (-v1.5.7)

PGP key used to sign compiled binary releases of CRYPTOMATOR prior to version 1.5.8.

2.2 CRYPTOMATOR 13

2.2.3.2 Binary signing key (v1.5.8-)

PGP key used to sign compiled binary releases of CRYPTOMATOR after version 1.5.8 (as of 2021-12-22).

14 LIST OF PUBLIC KEYS

2.3 GITHUB

2.3.1 Background

GITHUB is a commercial GIT repository hosting service company founded in 2008. It was purchased by MICROSOFT in 2016.[1]

2.3.2 History

2008. GITHUB founded in San Francisco.[1]

2008-03-10. GITHUB parent company LOGICAL AWESOME, LLC registered in San Francisco by Chris Wanstrath.^{2,3,1}

2008-05-14. First snapshot of the https://github.com website on the INTERNET ARCHIVE. 2.3.2

2017-08-16. Creation date of the 0x4AEE18F83AFDEB23 public key according to itself.

2017-11-14. Date of INTERNET ARCHIVE snapshot containing an early link to https://github.com/web-flow.gpg from a page on the help.github.com domain.^{2.3.3} Also the date of a post by GITHUB user jonathancross^{2.3.4} observing that the 0x4AEE18F83AFDEB23 key appears to be a new feature^{2.3.5}:

Yeah, just experimented and saw the same thing. Strange new "feature" of GitHub it seems.

2018-06-04. First snapshot of the 0x4AEE18F83AFDEB23 public key https://github.com/web-flow.gpg on the INTERNET ARCHIVE.^{2.3.6}

2021-05-25. Public key 0x4AEE18F83AFDEB23 fingerprint explicitly published at GITHUB documentation website. ^{2,3,7}

2.3.3 Public Key Details

As of 2021-07-19, when a user logs into github.com and creates a GIT commit through a web browser, GITHUB will automatically sign the commit against a GPG key^{2.3.8} with the fingerprint:

This key is available for download at GITHUB's documentation website at https://github.com/web-flow.gpg .^{2,3,9} This particular link as well as the full key fingerprint was added to the GITHUB documentation repository in a commit dated 2021-05-25^{2,3,10}.

^{2.3.1.} See https://businesssearch.sos.ca.gov/Document/RetrievePDF?Id=200807010145-721605 and https://businesssearch.sos.ca.gov/Document/RetrievePDF?Id=200807010145-2544282 from https://opencorporates.com/companies/us_ca/200807010145.

^{2.3.2.} See $\verb|https://web.archive.org/web/20080514210148/http://github.com/.$

2.4 RASPIBLITZ 15

2.4 RASPIBLITZ

2.4.1 Background

RASPIBLITZ is a software package designed to facilitate operation of a LIGHTNING NETWORK and BITCOIN node. The software is version controlled using GIT, with the main git repository available at GITHUB.^{2,4,1} As of 2021-07-18, the principal maintainer appears to be Christian "rootzol" Rotzoll^{2,4,2}.

2.4.2 History

2019-09-03. The creation date of rootzol's 0x1C73060C7C176461 public key.

2019-09-05. rootzol added their public key fingerprint 0x1c73060c7c176461 to the FAQ of the RASPIBLITZ GITHUB repository.^{2,4,3} They linked their keybase. io page as a source of the public key.

2020-10-31. The first snapshot of the raspiblitz.org website appeared on the Internet Archive. $^{2.4.4}$

2021-02-07. Andreas Antonopoulos posted a YouTube video identifying RASPIBLITZ as a popular Bitcoin full node software package. ^{2.4.5}

2021-05-18. rootzol added their public key fingerprint 0x1C73060C7C176461 to the README of the RASPIBLITZ GITHUB repository.

2.4.3 Public Key Details

2.4.3.1 Christian "rootzol" Rotzoll

rootzo1's PGP key^{2,4,6} may be downloaded from their Keybase page.^{2,4,7}. Their fingerprint information is as follows:

```
2.4.1. See https://github.com/rootzoll/raspiblitz.
2.4.2. Their public key 0x1c73060c7c176461 is available at: https://keybase.io/rootzoll.
2.4.3. See https://github.com/rootzoll/raspiblitz/commit/
75ebdd8d571cccc427b5d023a25c6e2e9e8a2da2.
